DIGITAL LITERACY PROJECT REPORT

Name: Shanya Kumari
Registration Number: 25MIM10023
Branch: Int.Mtech AI
Year: 1st Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 29/03/2026

Introduction

In today's fast-paced digital world, digital literacy has become an essential skill for students. It involves not only the ability to use digital tools but also understanding how to use them safely, responsibly, and effectively. As a Student Digital Ambassador, this project aims to spread awareness about important digital practices among peers.

This project consists of five tasks, each focusing on a different aspect of digital literacy. These include creating an awareness infographic, building a professional digital portfolio, exploring coding and collaboration tools, understanding email etiquette, and learning about cybercrime prevention. Each task provides practical experience and helps in developing useful digital skills.

Through this project, I gained valuable knowledge about managing my digital identity, improving communication skills, and staying safe online. Overall, this project has enhanced my confidence in using digital platforms responsibly.

Task 1: Digital Literacy Infographic

For this task, I created a digital literacy infographic using Canva. The objective of the infographic was to present key concepts of digital literacy in a simple and visually appealing way so that students can easily understand them. The infographic includes important topics such as the definition of digital literacy, useful digital tools for students, safe internet practices, email etiquette, and maintaining a professional online presence.

I used different colors, icons, and short bullet points to make the infographic engaging and easy to read. Each section highlights essential information that can help students improve their digital habits. For example, safe internet practices focus

on using strong passwords and avoiding suspicious links, while email etiquette emphasizes professional communication.

One challenge I faced while creating the infographic was selecting the right layout and balancing the amount of text with design elements. However, this task helped me improve my creativity and presentation skills. Overall, it was an interesting and informative experience.

Task 2: Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are essential for building a professional online presence and showcasing skills. GitHub is mainly used for storing and managing coding projects, which helps in tracking progress and sharing work. LinkedIn is a professional networking platform that allows users to connect with peers, mentors, and recruiters. Kaggle is useful for learning data science and participating in competitions.

I completed the basic setup of each profile by adding my educational details and a short introduction. This helped me understand how to present myself professionally online. Over the next four years, I plan to regularly update these platforms by adding projects, learning new skills, and connecting with professionals.

This task highlighted the importance of maintaining a strong digital identity. It also motivated me to stay consistent in improving my skills and building a portfolio that will be useful for future internships and job opportunities.

Task 3: Coding & Collaboration Platforms

For this task, I explored both coding and collaboration platforms. I used HackerRank to practice coding and completed a beginner-level problem called “Solve Me First.” This helped me understand basic programming concepts such as input, output, and simple operations. It was a good starting point for developing my coding skills.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form consists of five questions, including multiple-choice and short answer types, related to digital literacy and safe online practices. I also explored the response section, where answers are automatically collected and displayed in a structured format.

These platforms are highly useful for academic purposes. Coding platforms help improve logical thinking and problem-solving skills, while tools like Google Forms make it easy to collect and analyze information. This task provided practical exposure and improved my understanding of how digital tools can be used effectively for learning and collaboration.

Task 4: Email Etiquette

A situation where poor digital communication can cause problems is when a student sends an email to a professor without a proper subject line or respectful tone. For example, writing a message like “Send notes fast” without greeting or explanation can appear rude and unprofessional. This may result in the professor ignoring the email, causing the student to miss important information.

This problem can be avoided by following proper email etiquette. A clear subject line, polite greeting, structured content, and proper sign-off are essential for professional communication. Using respectful language creates a positive impression and increases the chances of receiving a helpful response. This task helped me understand the importance of maintaining professionalism in digital communication.

Task 5: Cybercrime Awareness

While researching cybercrime, I was surprised to learn how common UPI fraud has become. Many fraudsters use simple techniques such as fake calls, messages, or payment requests to trick users into sharing sensitive information. This shows that lack of awareness is a major reason behind such incidents.

This task made me more careful about using digital payment platforms. I learned that I should never share OTPs or personal details and should always verify transactions before approving them. As a result, I will be more alert and cautious while performing online activities. This task helped me understand that awareness and basic precautions can effectively prevent cybercrimes.

Conclusion

This project provided valuable knowledge about different aspects of digital literacy. It helped me understand how to use digital tools effectively, communicate professionally, and stay safe online. Each task contributed to improving my practical skills and awareness of responsible digital behavior.

Overall, this project increased my confidence in handling digital platforms and highlighted the importance of maintaining a professional online presence. The knowledge gained from this project will be useful throughout my academic journey and future career.
